<td>The UConn School of Pharmacy’s Department of Pharmacy Practice impacts patient health and well-being worldwide by combining scholarly excellence with public engagement and community-based research and practice partnerships. Students learn from faculty and preceptors that not only teach students but also conduct research and provide patient care on health care teams in hospitals, clinics, accountable care organizations, and community pharmacies throughout the State of Connecticut and beyond. This active connection with patients provides students with invaluable opportunities to apply learning to real world challenges. Beyond the classroom, our faculty are integrally involved in national and state pharmacy organizations, federal and state agencies, and the legislature. These connections help us to identify issues and create and test new paradigms in care through our scholarship.</td>

Championing Wellness Through Public Engagement

As the State of Connecticut’s flagship public university, UConn is committed to community service. The School of Pharmacy’s Department of Pharmacy Practice, and our pharmacy students are major contributors. Five of our faculty members and a student-faculty team have been honored through the University’s Provost’s Awards for Excellence in Community Engaged Scholarship. We received the Weaver award for Public Engagement from AACP in 2021 and were selected by the Hartford Business Journal as Health Care Heroes in 2022.

Faculty and students actively support:

- **Multilingual mobile care clinics.** These clinics serve the health care needs of uninsured migrant farm workers, homeless patients, and low-income long-term care patients.

- **Community health centers in urban settings.** Interdisciplinary teams of students and faculty from pharmacy, nursing, medical, and dental medicine work together in inner city settings to better understand social determinants of health and how to best engage diverse and economically disadvantaged patients.

- **Community education.** Community health events include blood pressure screenings, naloxone distribution and education or educational talks at senior centers, soup kitchens, high schools, health fairs, and community centers.

- **Communication of critical information.** We engage the community through consumer-facing television, radio, online, and print media. Our faculty have been interviewed for stories covered on the BBC, NBC Nightly News, Good Morning America, The Dr. Oz Show, WNPR, PBS, Huffington Post, Chicago Tribune, Los Angeles Times, New York Times, Newsweek, Vogue, and many more.

- We are among the top schools of pharmacy in media reach across the globe.

Leadership in Pharmacy Practice — Advocating for Policy and Practice Change

UConn School of Pharmacy faculty are influential advocates for new models of care. Some of the concerns we have addressed include problems associated with polypharmacy, medication errors, and patient compliance. Among the organizations faculty have held leadership roles in are:

- American Association of Colleges of Pharmacy
- American Pharmacists Association
- Hematology Oncology Pharmacists Association
- American Society of Consultant Pharmacists
- American College of Clinical Pharmacy
- American Society of Health-System Pharmacists

We have also worked closely with the governor’s office; state agencies such as the Office of Health Strategy, Department of Public Health, and Department of Social Services; and the Connecticut legislature to help assess, define and craft changes in the health care system over the years.

By providing our knowledge and support, we ensure that the State of Connecticut has the tools it needs to function effectively and expand opportunities for pharmacists to improve patient care.
Simulation robot, SimMan, is one way students can learn how to care for a patient.
Professor Diana Sobieraj presents her award-winning asthma research to pharmacy students.
The Department of Pharmacy Practice oversees two collaborative outcomes research groups: Health Outcomes, Policy, and Evidence-Synthesis (HOPES); and Performance Improvement for Safe Medication Management (PRISM). These groups study and analyze public health data and make medication and care pathway recommendations.

**HOPES**

HOPES is comprised of UConn School of Pharmacy faculty members that evaluate the benefits and adverse effects of drugs, devices, natural products, and procedures against each other.

The group promotes evidence-based practice by determining which drugs, devices, dietary supplements, and procedures have the best balance of benefits to adverse events. Physicians, health systems, governmental agencies, medical societies, healthcare payors, and patients need this information to make optimal health decisions.

We have worked with the following federal agencies in an effort to assist public health decisions:

</tbody>
</table>

**As experts we have advised on the proper use and safety of:**

- Heart medications, devices, and procedures
- Oral anticoagulants and hemostatics
- Dietary supplements
- Drugs of abuse
- Mental health drugs in geriatric patients
- Asthma medications
PRISM

PRISM is comprised of a group of faculty and outside pharmacists that conceptualize, establish and evaluate new models of health care with a focus on the role of a pharmacist.

PRISM’s goal is to improve medication effectiveness, safety and care efficiency and lies at the intersection of community engaged research, policy, and clinical care.

Faculty and students envision and investigate new models of care that include or expand the role of the pharmacist and test their value in the real world.

PRISM’s work has paved the way for the legislative change and education required to allow pharmacists to provide:

• Immunizations. Pharmacists are now the second most common providers of immunizations in Connecticut and a prime place that patients who are uninsured or underinsured can go.

• Long-acting antipsychotic drug injections. We have also trained dozens of pharmacists in community pharmacies across the state to provide these injections. This is a safety net for them and for society.

We are pioneering:

• The assessment of community pharmacy workflow to maximize pharmacist patient interaction.

• Pharmacist-inclusive health care teams to optimize medical office efficiency.

• The role of the pharmacist as a provider of screenings, immunizations, and point-of-care testing in underserved urban and rural areas.

• The role of the pharmacist as a provider of comprehensive medication management in public/population health.
