

RISK MANAGEMENT IN ANTICOAGULATION

Youssef Bessada, PharmD, BCPS, BCCP
Assistant Clinical Professor of Pharmacy Practice
UConn School of Pharmacy

1

Faculty Disclosures

Youssef Bessada, PharmD, BCPS, BCCP has no actual or potential conflict of interest associated with this presentation

Previous iteration developed by:

- Michael Smith, Pharm.D., BCPS, CACP
- Information reviewed, updated and built upon for new iteration

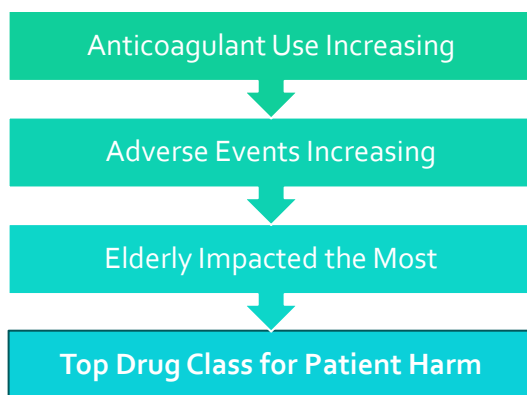

2

Learning Objectives

1. Discuss the education and training needs of pharmacists who participate in anticoagulation services.
2. Discuss the documentation needs of a pharmacists-run anticoagulation service or clinic.
3. Identify corporate infrastructure needs to support anticoagulation services or clinics.
4. Explain the necessary implementation strategies for establishing, strengthening and sustaining an anticoagulation stewardship program

3

Risk Management in Anticoagulation

Burnett AE & Barnes GD. Res Pract Thromb Haemost. 2022 Jul 17;6(5):e12757.
Budnitz DS, et al. JAMA. 2021;326(13):1299–1309.

Image from: Shehab N et al. JAMA. 2016 Nov 22;316(20):2115–2125.

4

Risk and the Rise of Anticoagulation Stewardship

DOAC-related ED visits	
2011	2.3%
2017	37.9%

Geller AI, et al. Thrombosis Research. 2023; 225, 110–115.
Burnett A, et al. Thrombosis Update. 2022;9:100125

Image from: Geller AI, et al. Thrombosis Research. 2023; 225, 110–115

Daily Pharmacy Practice Requires Risk Mitigation Strategies:

- Involvement of pharmacy personnel & anticoagulation clinics is proven to improve AC-outcomes
- However, with rise in DOAC use- there is also a rise in DOAC-related adverse events
- Pharmacists are taking on risk when they manage anticoagulation therapy (warfarin, DOACs, LMWH etc.)

5

Risk Management in Anticoagulation

- **Risk Management-** *Supports implementation of strategies to minimize organizational risk by minimizing the number of avoidable adverse outcomes*
- **Involves protecting:**
 - Yourself
 - Coworkers
 - Institution
 - Patients

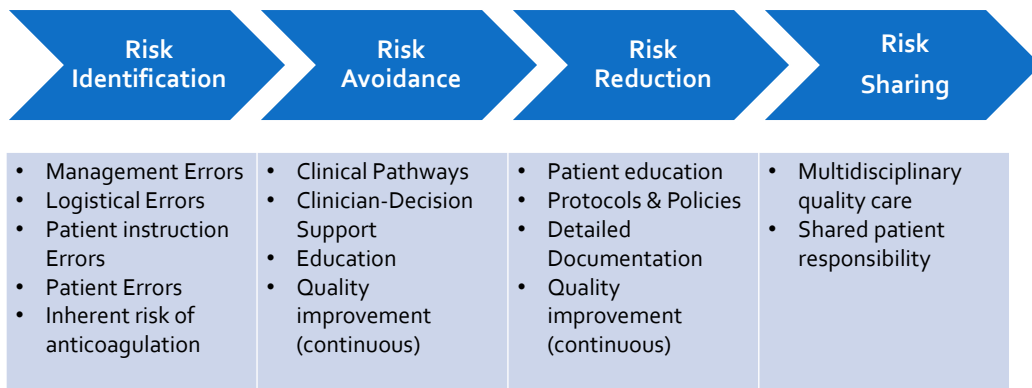

- **Anticoagulation Stewardship - A coordinated, efficient, and sustainable system-level initiative designed to achieve optimal anticoagulant-related health outcomes and minimize avoidable adverse drug events (ADEs)**

System-wide Anticoagulation stewardship efforts are the key to risk management in anticoagulation

Core Elements of Anticoagulation Stewardship Program. AC Forum. Accessed 03-24-2025
Burnett AE & Barnes GD. Res Pract Thromb Haemost. 2022 Jul 17;6(5):e12757.

6

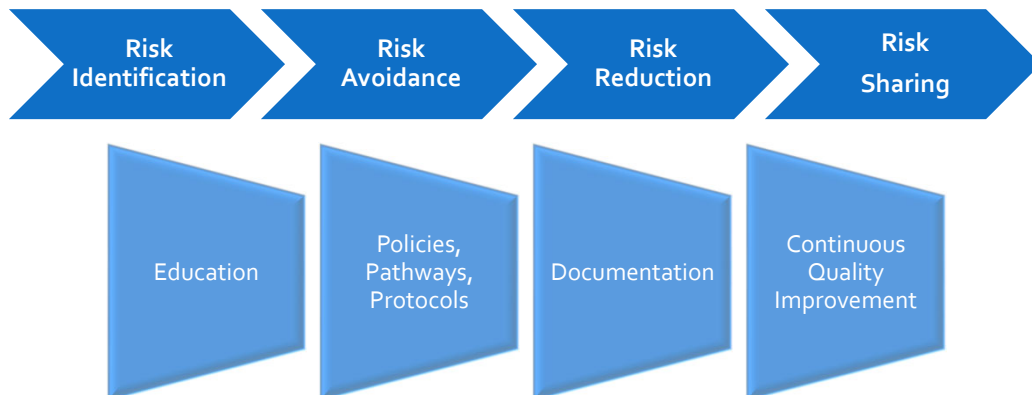

Risk Management Process

National Quality Forum & Anticoagulation Forum. Advancing Anticoagulation Stewardship: A Playbook. Accessed 2025 03 28

7

Risk Management Process

8

Comprehension Question

Anticoagulation stewardship, as a key to risk management, is most effective when implemented at which level of anticoagulation practice management?

- A. Individual-level
- B. Clinic-level
- C. System-level

Anticoagulation Stewardship - A coordinated, efficient, and sustainable **system-level initiative** designed to achieve optimal anticoagulant-related health outcomes and minimize avoidable adverse drug events (ADEs)

Core Elements of Anticoagulation Stewardship Program. AC Forum. Accessed 03-24-2025
Burnett AE & Barnes GD. Res Pract Thromb Haemost. 2022 Jul 17;6(5):e12757.

9

Education

Provider Education

- Core of successfully mitigating risk in anticoagulation programs & stewardship
- Should review disease states, medications, and management
- Strengthened with competencies, practice and assessment
- Provider 1st—strategy, to have successful patient education

Patient Education

- Dependent on provider education
- Necessary for “shared-decision making”
- Involves patient in responsibility for management & follow-up
- Key during transitions of care particularly

Core Elements of Anticoagulation Stewardship Program. AC Forum. Accessed 03-24-2025
National Quality Forum & Anticoagulation Forum. Advancing Anticoagulation Stewardship: A Playbook. Accessed 2025 03 28

10

Provider Education

Goal-Oriented, Evidence-Based & Comprehensive

- Proficient knowledge of:
 - Disease states
 - Medications
 - Anticoagulation management
- Depth attained through various levels of Bloom's Taxonomy
- Set **growth** mindset to encourage culture of lifelong learning
- Competency assessed and documented using a standardized method
 - System-specific with own policies (knowledge/case assessment, direct observation etc.) +/-or
 - National standard (e.g. National Certification Board for Anticoagulation Providers)
- Resources:

Bloom's Taxonomy

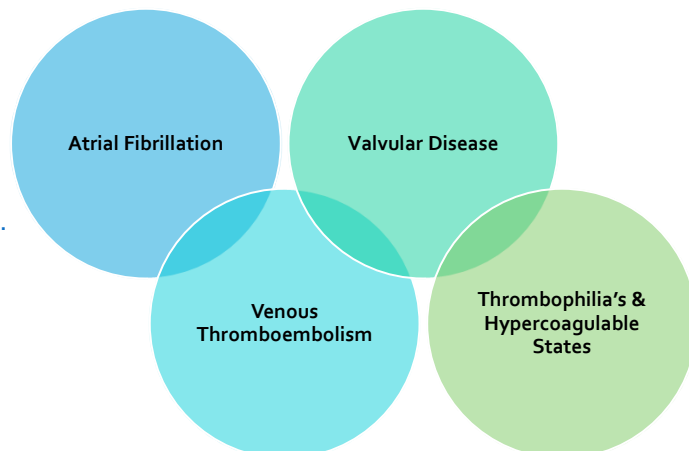

- Knowledge (reading, lectures)
- Comprehension (discussions)
- Application, Analysis, Synthesis (Case presentations, practice-based teaching)

11

Provider Education: Disease States

- Epidemiology
- Pathophysiology
- Diagnosis
- Evidence-based therapeutic approaches (pharmacologic vs. non-pharmacologic)
- Monitoring
- Follow-up & Progression

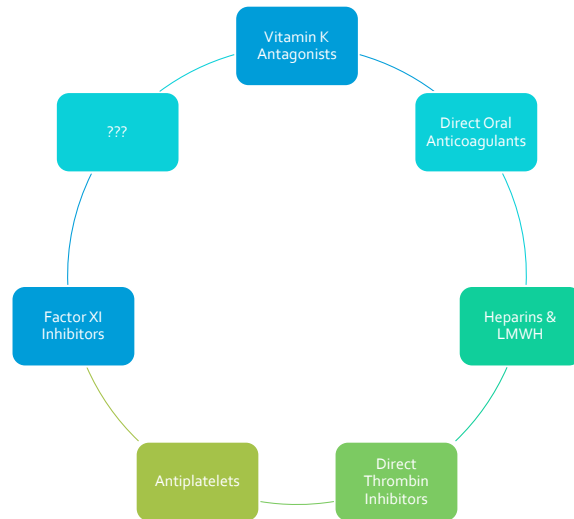

Constantly Updated!

12

Provider Education: Medications

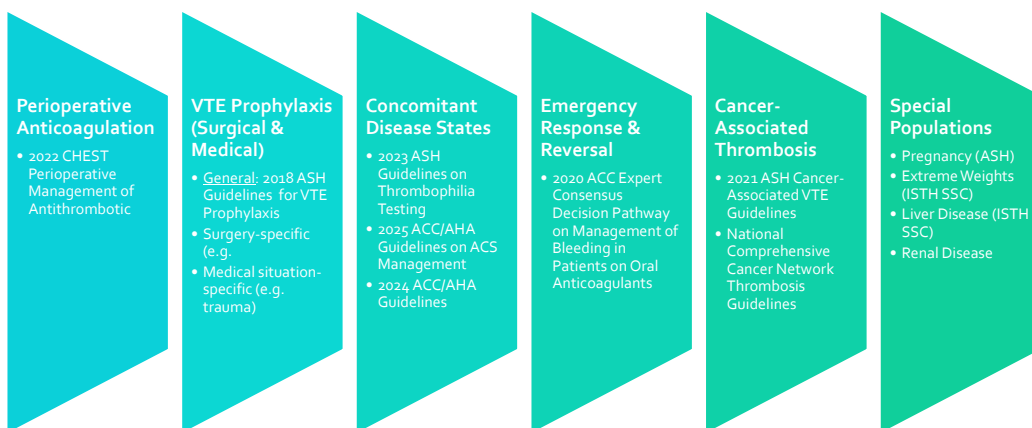

- Pharmacology
- Pharmacokinetics /-dynamics
 - Changes in special populations (renal/liver disease, pregnancy, surgery (gastric), extreme body weights, acute illness)
- Therapeutic Efficacy (thrombosis prevention)
- Safety (bleed risk!)
- Interactions (diet & medication)
- Monitoring

Constantly Updated!

13

Provider Education: Management

Constantly Updated!

Best described through active learning & case-based approaches with resources above

14

Patient Education

Pharmacist's Role in Education:

- Serve as expert source of guidance for medication/ lifestyle guidance
- Use patient-friendly terms
- Vital for management in **transitions of care**
- Maximize time in therapeutic range through collaboration (VKA) & minimize avoidable bleed/thrombosis
- **Resources:**
 - Anticoagulation Forum: Patient & Family Education [Apps](#)
 - [Michigan Anticoagulation Quality Improvement \(MAQI\) Patient Education Toolkits](#)
 - [American Heart Association Guide to Warfarin Toolkit](#)

Image adapted from AC Forum Patient & Family Education Site. Available from: <https://acforum.org/web/resource-center-details.php?selectTopic=1>

15

Comprehension Question

Which of the following is NOT an effective method of standardizing and disseminating provider education as part of a risk management strategy?

- Assessing comprehension via system-specific or standardized assessments
- Highlighting patient errors from past risk management strategies
- Utilizing various levels of Bloom's taxonomy to provide education

Set **growth** mindset to encourage culture of lifelong learning

16

Policies, Protocols & Pathways

Policies

- Define roles, responsibilities and limitations (based on license)
- Define education process/standard (providers & patients)
- Define prescription actions
- Define patient enrollment, discharge and referral (e.g. non-compliance)

Protocols

- Outline actions associated with various roles
- In collaborative practice: define dose-adjustment principles, follow-up and critical values for reporting (and actions)
- Provide standardized management steps & processes

Pathways

- Simplified, proactively agreed upon protocols, in acute management situations
- Outline the exact steps & processes each discipline follows in a specific situation
- Centered around patient
- Require multidisciplinary buy-in

Core Elements of Anticoagulation Stewardship Program. AC Forum. Accessed 03-24-2025

17

Policies, Protocols & Pathways

Policy

Ambulatory or
Inpatient Care
Pharmacist-Driven
Warfarin Management
Policy

OR

AC Perioperative
Management Policy

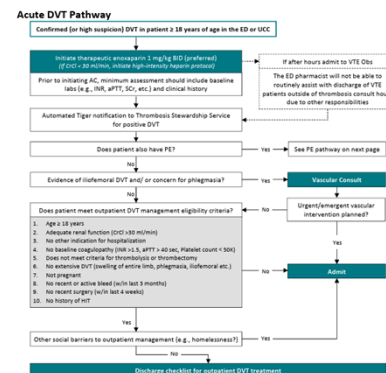

Protocol

DOAC Renal-Dose
Adjustment Protocol

OR

Nurse-Driven Heparin
Dosing Protocol

Pathway

UNMH P&T Committee, Thrombosis & Hemostasis Steering Committee Last updated: July 2023. Available from: https://hsc.unm.edu/medicine/departments/emergency-medicine/docs/clinical_resources/general-policies-and-guidelines/management-of-acute-vte-pathway_7_11_2023_aeb.pdf

18

Policies, Protocols & Pathways

- **Necessities:**

- **Should** ALL be created with multidisciplinary support (Cardiology, Hematology, Pharmacy, Surgery etc.)
- **Should** be reviewed and approved by leadership regularly
- **Should** be able to guide new practitioners through key patient scenarios
- **Should** be clearly documented, if and when, variance from policy occurs

- **Outcome of successful policies, protocols & pathways:**

- Shifts responsibility and risk from individual practitioners/ care providers
- Reduces “avoidable” errors and allows root cause analysis for “unavoidable” errors as basis for quality improvement

Core Elements of Anticoagulation Stewardship Program. AC Forum. Accessed 03-24-2025
National Quality Forum & Anticoagulation Forum. Advancing Anticoagulation Stewardship: A Playbook. Accessed 2025 03 28

19

Comprehension Question

The goal of a successful policy, protocol or decision pathway is to...

- Confine decisions to a set of rules that all providers must adhere to
- Minimize risk by reducing the need for clinical judgement calls
- Shift risk from individual practitioners/ care providers on to system

20

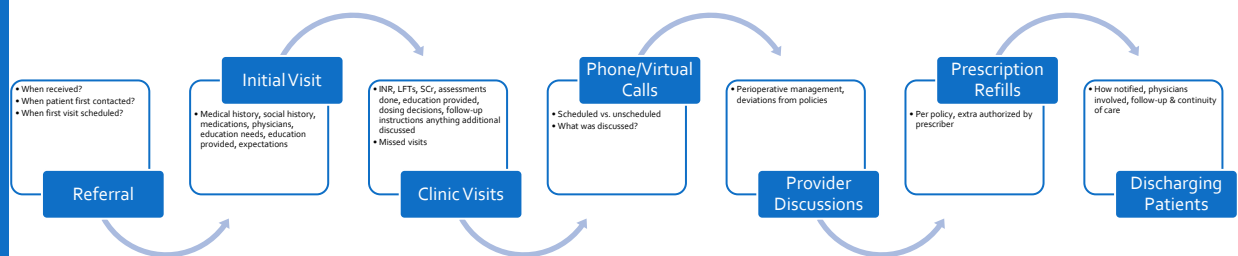

Documentation

- One of most important “risk management” tools
- Vital to document every happening in a high-risk clinical environment (small and big)
- **Should cover:**
 - Outpatient, inpatient, transitions of care management
 - Education, training, and competency assessment process for providers included in clinical environment
 - **ALL interactions with patients**
 - Quality assurance/improvement

Core Elements of Anticoagulation Stewardship Program. AC Forum. Accessed 03-24-2025
National Quality Forum & Anticoagulation Forum. Advancing Anticoagulation Stewardship: A Playbook. Accessed 2025 03 28

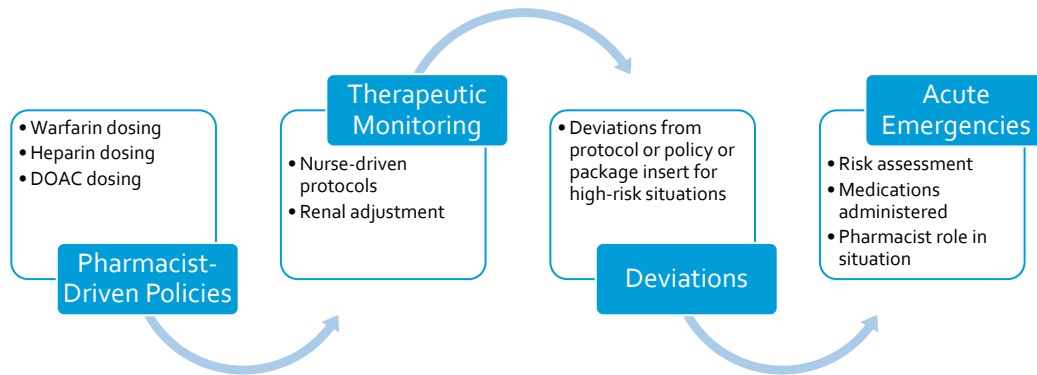

21

Documentation: Outpatient Examples

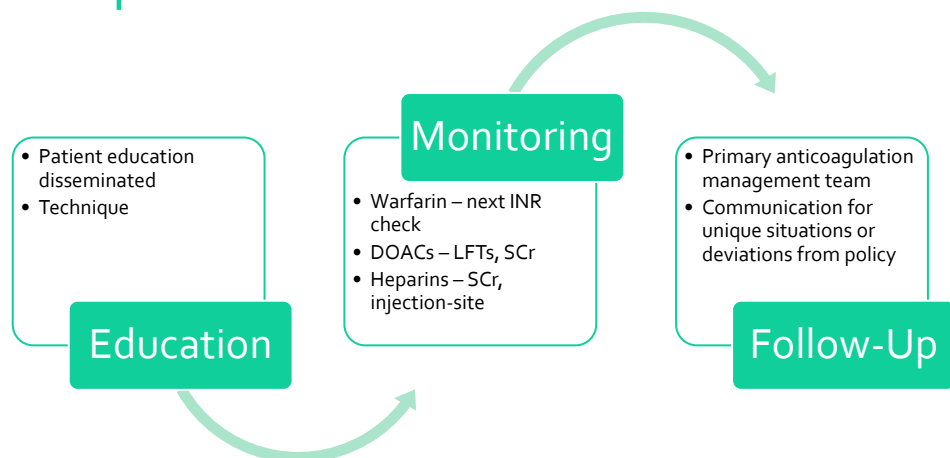

22

Documentation: Inpatient Examples

23

Documentation: Transitions of Care Examples

24

Documentation

Documentation Logistics

- Paper-charts are prone to error/loss and are out of favor
- Computer-based documentation specific to health system (many available)
 - Commercial
 - Health-system specific
- Key part of infrastructure in risk management strategy

Keys to Effective Documentation Software

- Single database allows for more congruent data collection & dissemination, and minimizes avoidable errors
- Maintains patient privacy
- Utilizes technology to minimize risk, if available (population health reporting, clinician-decision support tools, best practice alerts, effective provider communication etc.)
- Allows for quick & effective access to quality improvement data desired by system (e.g. TTR, % in therapeutic range, missed appointments, incorrect DOAC dosing etc.)
- No perfect system, just perfect practice on existing systems

Core Elements of Anticoagulation Stewardship Program. AC Forum. Accessed 03-24-2025
National Quality Forum & Anticoagulation Forum. Advancing Anticoagulation Stewardship: A Playbook. Accessed 2025 03 28

25

Continuous Quality Improvement

- Vital to include on a **regular** basis
- Allows for enhancement of risk management strategy with time and clinical updates
- Should have anticoagulation stewardship champion or committee to lead this
- Prioritize by areas of highest risk
- Allows for enhancement of infrastructure:
 - Clinic staffing (providers & support)
 - Allows safe assessment of care ratios
 - Cost-savings/benefit
 - Patient education
 - New software / clinical tools

National Quality Forum & Anticoagulation Forum. Advancing Anticoagulation Stewardship: A Playbook. Accessed 2025 03 28

26

Comprehension Question

A key tenant to risk management strategy in anticoagulation management is continuous quality improvement, which can best be implemented into **daily** workflow by:

- A. Constantly updating to the best software to review metrics
- B. Standardizing documentation to allow for easy retrieval of key metrics
- C. Minimizing the number of clinic visits per day to allow for metric review

27

Summary

- **Reduce risk by...**
 - Providing high quality anticoagulation stewardship in all phases of care (inpatient, outpatient, TOC)
 - Educating knowledgeable practitioners (who in turn educate patients)
 - Strong and complete policies, protocols & pathways
 - Robust documentation system
 - Continuous quality improvement

28

THANK YOU
